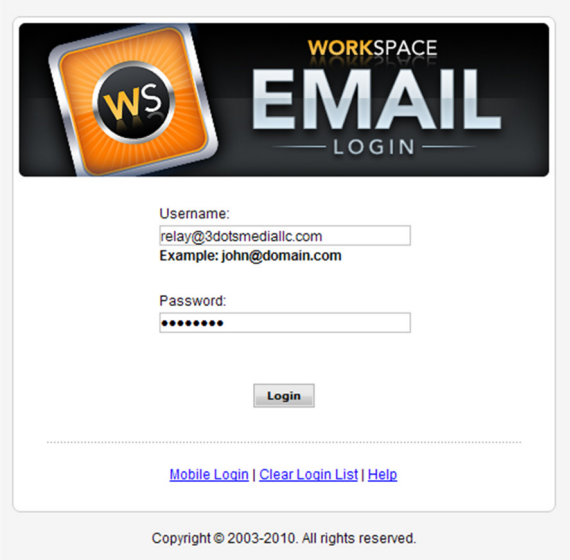
Accessing the Old Mail Server via Web Mail

The webmail address of the old server is: http://mail.dotnetpanels.com

Use your e-mail address and password to login to view the mail at this location until December 31.

Accessing the New GoDaddy Web Mail



GoDaddy Webmail will be:

https://login.secureserver.net/index.php?app=wbe

Enter your e-mail address as the username and the default password.

Note you can change the password to anything you'd like via the webmail under Settings…Personal Settings. *If you change your password for the webmail, make sure you change it for your Outlook client if you use it on your PC.*

Setting Up Outlook for your New E-Mail Account:

You can set up your Outlook or Outlook Express to download e-mail from the new GoDaddy accounts by following the directions below.

Automated Set-up

Click the link below to download a tool to help you set up this account on your PC for Outlook:

http://dl.dropbox.com/u/7089527/goDaddy%20set_up_outlookset.exe

Manual Set-Up

Note you can set the accounts up now and when the actual e-mail accounts are created over the weekend, and then they should start receiving mail.

Click the link below for a step by step walkthrough for connecting to the new GoDaddy e-mail account using Outlook.
